

PRESS RELEASE

Arneg and Incold at Chillventa 2026

At Chillventa 2026, Arneg and Incold will be presenting a range of innovative, efficient and sustainable solutions developed to meet the ever-changing needs of the refrigeration market.

Campo San Martino (PD), 10 September 2026 - The Arneg Group will be one of the key players at **Chillventa 2026**, the leading international trade fair for refrigeration, air-conditioning, ventilation and heat pump technologies.

From **13 to 15 October**, at the **Messe Nürnberg** exhibition centre in Nuremberg, Germany, **Arneg and Incold** will present to a public of international professionals solutions and technologies that reflect a vision focused on innovation, efficiency and sustainability.

Among the new products on display, Arneg will be showcasing **TOWER RING**, the concept unveiled to great public acclaim at EuroShop 2026 that redefines the relationship between technology and store furnishings. Designed for stores with limited space, and for situations in which it is not possible to install dedicated outdoor units, TOWER RING enables a single refrigeration unit to serve multiple displays. The system integrates seamlessly into the store's furnishings and keeps the R290 refrigerant charge of each unit to under 150 grams. At Chillventa, TOWER RING will be showcased in a configuration featuring **OSAKA 3 LX** vertical cabinets with doors.

Also on display will be the new **IMOLA** promotional island, available in medium temperature (MT) and low temperature (LT) versions, with either a built-in or remote refrigeration unit. The island's clean lines, large glass panels and sliding covers are designed to add value to the products on display, improve visibility and offer a more functional shopping experience.

Space will also be dedicated to the new **PRISMA** range of transcritical CO₂ refrigeration systems for mini-markets and small stores. Compact, efficient and sustainable, PRISMA delivers high performance from a small footprint, and offers maximum flexibility for installation even in settings where optimising space is a strategic requirement.

Rounding off the Arneg offering will be the **GLOBO** CO₂ refrigeration system, the R290 **HP CHILLER**, and other advanced technologies like **Ring Systems** and **Glycol Systems**, developed for maximum flexibility, control and performance.

Gian Paolo Di Marco, Export Sales Director at Arneg S.p.A., announced:

"We are delighted to be taking part in Chillventa again this year. Chillventa is a leading event for the commercial refrigeration sector and for all professionals with an interest in innovation and sustainability. Once again this year, we shall be presenting solutions that combine high performance, energy efficiency and reduced environmental impact, reaffirming our commitment to the development of increasingly efficient and sustainable technologies."

Incold, the Arneg Group company that specialises in the manufacture of cold rooms, will also be exhibiting at Chillventa with a display area dedicated to **cold chain solutions**, ranging from cold rooms to rapid roll-up doors.

Incold will guide visitors through its range of solutions for commercial and industrial refrigeration on two stands situated one opposite the other and showcasing the three main product families in the company's catalogue.

The display route will start in an area dedicated to **commercial cold rooms**, where the new **modular cabinet** and **MULTISYSTEM cold rooms with right-angle joins** will be on display. The same area will also feature the **MULTI** and **EVOSYSTEM** ranges, now enhanced by new details and technical solutions.

Next will be a section dedicated to **industrial cold rooms** and associated accessories. Also on display alongside the conventional **GS** panels, will be the innovative **POLAR** panels, designed to speed up assembly and improve sealing. This product will be presented in all available configurations, along with its associated finishes and certifications.

A separate area will be dedicated to **rapid roll-up doors**. Four models will be on display, incorporating different technologies that ensure ever-higher levels of airtightness. These solutions are designed specifically for applications in the industrial refrigeration sector.

The selection on display will be rounded off by Incold's range of **isothermal doors**, including the new **INDUSTRIAL** doors, which are specially designed for large warehouses and heavy-duty environments.

Filippo Finco, CEO of Incold S.p.A., explains:

"The 2026 edition of Chillventa will be a forward-looking event dedicated to innovation, technological advances and the development of new refrigeration solutions. It will provide Incold with an important opportunity to showcase the technologies and products through which we continue to meet the needs of a constantly evolving market, and to deliver quality, reliability and efficiency."

Arneg S.p.A.

Arneg was formed in 1963, in the northern Italian province of Padua. From the very beginning, its founders, Roberto Marzaro and Luigi Finco, instilled in the company the solid principles and moral values typical of popular Venetian culture. These are succinctly summed up in a quote from Mr Marzaro: "Dream with courage, ethics, common sense and imagination". Arneg has grown constantly with this spirit, and is ever more convinced that in order to be effective, product development must be sensitive to key issues like environmental protection, energy saving and respect for people. Today, Arneg is an international leader in the design, production and installation of complete commercial refrigeration systems and equipment for the retail sector. Arneg stands out for its ability to produce custom designs that combine excellent performance, sustainable innovation and energy optimisation with true Italian style.

About Incold

Founded in 1996 as part of the Arneg Group, Incold is one of the leading names in the commercial and industrial refrigeration sector.

Originally established as a company specialising in the manufacture of commercial cold rooms, over the years Incold has expanded its range of products and services by developing new expertise and new lines of business. Today, the company operates in various complementary sectors, including the manufacture of industrial cold rooms, cold room doors and rapid roll-up doors, and offers comprehensive solutions for the cold chain logistics, food, retail and manufacturing sectors.

The company's growth has been characterised by constant commitment to innovation and the ability to tackle increasingly complex projects. Among the most significant milestones in Incold's history are the construction of its first large-scale refrigerated distribution centres and its entry into the turnkey industrial plant market, both of which helped to consolidate the company's reputation at the national and international level.

Today, Incold exports its solutions to numerous markets and is a point of reference not only for its own customers, but for the other companies in the Arneg Group too. With thirty years' experience behind it, Incold continues to invest in technology, sustainability, quality and the development of its people as means to contribute to the development of the cold chain of tomorrow.

The Arneg Group

Arneg is an international group, leader in the design, production and installation of equipment for the retail sector. The Group is present worldwide through its main brands: Arneg, Incold, Intrac, Oscartielle, Frigo Tecnica Internazionale and, recently, Frigomeccanica too. This last brand, a historic Italian company specialising in the Ho.Re.Ca. sector and furnishings for bars, ice cream parlours, pastry shops and businesses serving food and drink, introduces a new market segment to further enrich the offering of the Arneg Group. With this latest acquisition, the Group has further consolidated its global presence, which now consists of 23 production plants and 21 trading companies and representative offices around the world. This position of leadership is the result of synergy between all the companies in the Group along with a shared heritage of competence, experience and vision fed by a worldwide network of production and distribution sites. Every decision the Group makes is aimed at producing tangible results – solutions that promote lasting, sustainable development, and that generate real benefits for customers, communities and for the future of the planet.
